Abstract

The present invention relates to new aromatic bicyclic compounds of general
 10 formula

wherein Ar, X, Y and Z and R¹ to R³ are defined as in claim 1, the tautomers, the
 15 enantiomers, the diastereomers, the mixtures thereof, the prodrugs thereof and the
 salts thereof, as well as their preparation and their use as pharmaceutical
 compositions. The compounds of the above general formula I have valuable
 pharmacological properties, particularly an antithrombotic activity and a factor Xa-
 inhibiting activity.
